<p>
    A market is a place where people go to buy or sell things.
    When people have products to sell, they set up a market place. There
    may be a special building for the market place, or the market may be
    held in an open space where the sellers can put up a stall (like a
    kind of tent) and then take the stall down at the end of the day.
